

Important: Read all instructions prior to installation.

Solar-Powered Spot Light Kit

Safety and Notes

- For outdoor use only.
- Not for underwater use. Do not use with submersible or pool/spa equipment.
- Light will shut off automatically in excessively cold temperatures (below minimum operating temp.) to protect the light.
- Solar panel must be cleaned every three months for best lighting results.
- Weather and physical obstructions that block sunlight will negatively affect the ability of the light to charge. Make sure the light is installed in a location where direct sunlight is present.

Model	LFS-30K60D
Operating Temperature	14°–104° F (-10°–40° C)
IP Rating	IP65
Charge Time	4–6 hours direct sunlight
Operation Time	6 hours (high), 12 hours (low)

Installation Instructions

1. Attach the mounting arm to lights and panel.
2. Select locations within the cord length to install all components.
3. If wall mounting, use flange to make holes and mount lights and panel securely to wall. If ground mounting, attach stake and firmly press stake end of light/panel into moist soil without applying pressure to the light head or panel directly.
Note: make sure installation location has adequate sunlight to support proper charging.
4. Connect wiring.
5. Press the power switch once to set the panel to low mode. Press the switch a second time to set it to high mode. Pressing a third time will return the system to off.
6. Adjust light heads and panel to desired angle.
